and Technology Academic Lyceum*

**Abstract:** *This article describes the use of the latest innovation technologies and the latest reforms in our country. After our country gained independence, interest in teaching foreign languages increased and many opportunities were created for young people. All this is to make our youth study and contribute to our country.*

**Key words:** *innovative, education, manners, technique, technology, direction, society.*

**Introduction.**

As our first president Islam Karimov said, "Currently, teaching foreign languages is given great importance in our country. This is certainly not for nothing. There is no need to overestimate the importance of perfect knowledge of foreign languages for our countries, which are striving to take their rightful place in the world community today, and for our people, who are building their great future in solidarity and cooperation with our foreign partners. As a logical continuation of these thoughts, the Presidential Decree on measures to further improve the system of teaching foreign languages, adopted on December 10, 2012, expanded the opportunities for learning foreign languages. In our republic, new methods and requirements have been developed in accordance with the recommendations of the European framework for foreign language teaching and assessment of knowledge and skills of foreign language teachers (CEFR). According to it, textbooks were created for students of general education schools and vocational colleges. In accordance with these requirements, classrooms were

equipped with stands and new information and communication techniques. The demand for learning a foreign language is increasing day by day. The science of foreign language is divided into four aspects (reading, speaking, listening and speaking), and separate concepts and skills are given for each of them. Educational technologies are effective use of modern information technologies in the educational process.

The role of modern technology in language learning and teaching is incomparable. The use of technological tools is useful in every aspect of learning a foreign language (reading, reading, listening and speaking). For example, in order to listen and understand, of course, this process cannot be carried out without a computer, player, CD discs. Listening comprehension is one of the most important parts of language learning. At the same time, the student observes the speaker's pronunciation, grammatical rules, it is required to pay attention to vocabulary and its meanings. An important factor in the use of modern technologies in the educational process is that students know information and communication technologies well and are able to use them. Teaching and learning a foreign language using modern technologies is one of the most fruitful ways. In this process, including: - when using computers, the student can watch and listen to foreign language videos, demonstrations, dialogues, movies or cartoons. it is possible to listen and watch foreign language radio broadcasts and television programs; - use of tape recorders and cassettes, which are considered a more traditional method; - CD players can be used. The use of these technical tools ensures that the process of students' learning a foreign language is more interesting and effective [1]. Today, teaching through interactive games is becoming a tradition in schools.

The basis of the use of game technology is the activity that activates and accelerates the student. According to psychologists, the psychological mechanisms of playful activity rely on the fundamental needs of a person to express himself, to find a stable place in life, to manage himself, to realize his potential. In the process of games, the student is more interested in this activity

than in a regular lesson and works freely. The student believes that he can speak, listen, understand, and write in English while playing games, he is interested. We know that in the current educational process, the student should be the subject. Focusing more on interactive methods will increase the effectiveness of education. One of the most important requirements for English language classes is to teach students to think independently.

Today, English language teachers are using the following innovative methods based on the experience of pedagogues from the United States of America and England: - "Creative Problem Solving" to use this method, the beginning of the story is read and how it ends. the judgment of students is referred to; - "Merry Riddles" teaching riddles to students is important in teaching English, they learn unfamiliar words and find answers to riddles; - "Quick answers" helps to improve the efficiency of the lesson; - "Chigil yazdi" ("Warm-up exercises") using various games in the classroom to interest students in the lesson [3]; - "Pantomime" (pantomime) is a method where very difficult topics need to be explained it can be used in class or when students are tired when written exercises are done; - "A chain story" method helps students to develop oral speech; - "Acting characters" method can be used in all types of lessons. In order to teach the profession, people in professions such as "Interpreter", "Translator", "Writer", "Poet" can participate in the class and talk with the students; - "Thinkers meeting" poets and writers such as U. Shakespeare, A. Navoi, R. Burns can be "invited". At such a time, using the wise words they said in the lesson will help young people to be educated as perfect people; - The "When pictures speak" method is very convenient and helps to teach English and develop the oral speech of students, for this it is necessary to use pictures related to the topic; - Quiz cards are distributed according to the number of students and allow all students to participate in the lesson at the same time, which saves time [4]. As we have seen, each innovative technology has its own advantages. In all such methods, cooperation between the teacher and the student, the active movement of the student in the educational process is envisaged.

President Sh. Mirziyoyev held a video selector meeting on the improvement of the education system, using Finnish education as an example, and stated that if the teaching methodology in the school does not change, the quality, content, and environment of education will not change. ``he emphasizes.

We know that the English language has become the most necessary universal language not only in education, but also in technology, internet, information and even tourism. But every development goes back to education well received and given. In addition, at the same time, the use of the virtual world and the creation of computer graphics are increasing to the maximum, and most of the popular web browsers are mainly located in the United States, and by themselves, they operate in English. Or the technology that we use in our everyday life has an English instruction manual. Therefore, English language is becoming necessary not only in the field of education, but also in our daily life. In order to use it, we need to acquire it better in the educational process.
